Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)			
This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons: 1. Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:			
2. Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:			
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).			
Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)			
This International Searching Authority found multiple inventions in this international application, as follows:			
The special technical feature of the inventions (first-group inventions) in claims 1-6, 19 is "disposing the above temperature detecting means in the heating area, by the above partial heating means, of the above heating roller". The special technical feature of the inventions (second-group inventions) in claims 7-18 is "being so constituted as being heated by the above partial heating means with the above heating roller kept rotating while the fixing device is on standby". Therefore, the special technical features of the both inventions are not identical. (continued to extra sheet)			
As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.			
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.			
As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:			
4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:			
Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.			

International application No.

PCT/JP2004/015116

Continuation of Box No.III of continuation of first sheet(2)

Whereas the first-group inventions can control the abnormal temperature rise of the heating roller when the heating roller at a standstill is heated while on standby, the second-group inventions do not assume the fact itself that the heating roller is stopped while on standby; therefore, it is also impossible to consider that special technical features of the both inventions correspond to each other.
